

# TRANSIT

## BULLETIN

Vol. 19 No. 09

### Do you want to see more clearly?

#### Go for a TRANSIT truck body

All our boxes are now fully equipped with LED lights, to ensure the best lighting, simplified maintenance and more savings.

#### What is LED?

A light-emitting diode (LED) can turn almost all electricity that passes through it into light, without producing excessive heat.

Conventional light bulbs convert only a portion of electricity into light, and much of it is lost in heat. They therefore require more energy and produce less light.

#### LED lighting surpasses conventional lighting in:

- Profitability and energy savings
- Versatility and high resistance
- Durability - more resistant to shocks
- Unmatched lifespan
- Instantaneous maximal illumination
- Compact footprint

#### We offer you the best

We propose a wide range of LED lighting, including optic bars and oval lights, different types of ceiling lights, accent and precision lights, clearance lights, and much more.

Whether it's to reduce risk with our choice of exterior lighting, or to get a brighter view with our choice of interior lighting, you'll see the difference with TRANSIT!

#### Discover a different kind of truck body!
